Lipids and dementia An investigation of their relationship

Luke A McGuinness University of Oxford

A thesis submitted for the degree of Doctor of Philosophy

TBC

Abstract

This *R Markdown* template is for writing an Oxford University thesis. The template is built using Yihui Xie's bookdown package, with heavy inspiration from Chester Ismay's thesisdown and the OxThesis LaTeX template (most recently adapted by John McManigle).

This template's sample content include illustrations of how to write a thesis in R Markdown, and largely follows the structure from this R Markdown workshop.

Congratulations for taking a step further into the lands of open, reproducible science by writing your thesis using a tool that allows you to transparently include tables and dynamically generated plots directly from the underlying data. Hip hooray!

Lipids and dementia An investigation of their relationship

Acknowledgements

This is where you will normally thank your advisor, colleagues, family and friends, as well as funding and institutional support. In our case, we will give our praises to the people who developed the ideas and tools that allow us to push open science a little step forward by writing plain-text, transparent, and reproducible theses in R Markdown.

We must be grateful to John Gruber for inventing the original version of Markdown, to John MacFarlane for creating Pandoc (http://pandoc.org) which converts Markdown to a large number of output formats, and to Yihui Xie for creating knitr which introduced R Markdown as a way of embedding code in Markdown documents, and bookdown which added tools for technical and longer-form writing.

Special thanks to Chester Ismay, who created the thesisdown package that helped many a PhD student write their theses in R Markdown. And a very special tahnks to John McManigle, whose adaption of Sam Evans' adaptation of Keith Gillow's original maths template for writing an Oxford University DPhil thesis in Later provided the template that I adapted for R Markdown.

Finally, profuse thanks to JJ Allaire, the founder and CEO of RStudio, and Hadley Wickham, the mastermind of the tidyverse without whom we'd all just given up and done data science in Python instead. Thanks for making data science easier, more accessible, and more fun for us all.

Ulrik Lyngs Linacre College, Oxford 2 December 2018

List of Abbreviations

1-D, 2-D . . . One- or two-dimensional, referring in this thesis to spatial di-

mensions in an image.

Otter One of the finest of water mammals.

 $\bf{Hedgehog}\,$. . . Quite a nice prickly friend.

Introduction

Welcome to my thesis!

Introduction

This is a test of the bibliography (1)

There is grandeur in this view of life, with its several powers, having been originally breathed into a few forms or into one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved.

— Charles $Darwin^1$
